Selected Projects

Since 2020, I have worked as a freelancer, contributing my development and design expertise to over 15 projects. Leveraging my diverse skill set, I have successfully led and delivered more than 10 projects from concept to launch as both the lead designer and developer.
Here are some of my selected projects:

StickerHD E-commerce Website

StickerHD • Printing & E-commerce https://stickerhd.com/en

- Leading the development of a high-quality official website using **Next.js (ReactJS)** as the sole front-end developer, earning client stakeholder trust and contributing to ongoing monthly iterations
- Translate design mockups into precise web components using **styled-components**
- Developing smooth micro-interactions and **SVG animations** to enhance user experience
- Solely responsible for the website's UI/UX design, ensuring consistency and usability across the platform

Nubila.ai Official & Product Website

Nubila Inc • Blockchain & Machine Learning https://nubila.ai | https://nubila.network

- Led the development of high-quality websites using **Next.js** and **Tailwind CSS**, serving as the project lead, front-end developer, and interface designer
- Delivered the first version of the official website **within two weeks**, receiving highly positive client feedback and earning trust to lead the front-end, driving multiple high-quality iterations over the next six months
- Designed and implemented engaging animations and interactions that effectively showcased the client's product features and mission

Treenet Official Website

Treenet • Car Charging Stations https://treenet.tw

- Developed the official website using **Next.js** and **Tailwind CSS**, designing and implementing eye-catching **micro-interactions** on the front page
- Designed, developed, and launched the website **within one month**, receiving impressive feedback from stakeholders
- Led the website's design and built a **scalable design system** for future expansion, while also integrating it into the codebase to support other developers in growing content for future iterations

Personal Website

Han Wang • Freelancer https://han.gallery

- Developed my personal website using **Vue.js** and **SCSS**
- Created and integrated high-quality **SVG animations**, **video animations**, and **micro-interactions**
- Designed the visual identity, user experience, and interface
